Brownfield Service

Make your patch panels
intelligent

inteliPhy Brownfield Service

Independent of your current vendor

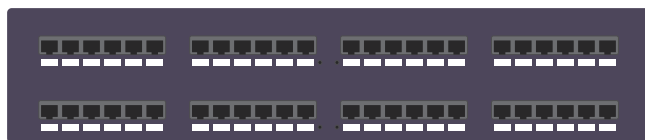

Manual processes for tracing patching activity and documenting trace information with Excel, Visio, AutoCAD are very time consuming for employees and error-prone. Most existing patch panels are from vendors that do not offer technology to upgrade infrastructure with intelligence.

R&M is different. Accelerate digital and increase your efficiency with real-time automatic documentation of physical connections and visualization in R&M's easy-to-use DCIM.

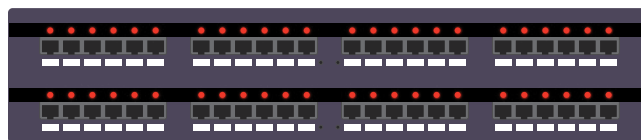

The inteliPhy Brownfield Service is a customization program available for patch panels from any vendor, giving you the chance to upgrade non-R&M physical network infrastructure with a Smart Networks IoT layer.

Smart Networks is R&M's architecture to bring intelligence and automation to physical network infrastructures. Independent of whether your existing installation is based on any structured cabling vendor, the inteliPhy add-on service enables you to deliver a holistic view of your network and its connectivity in real time.

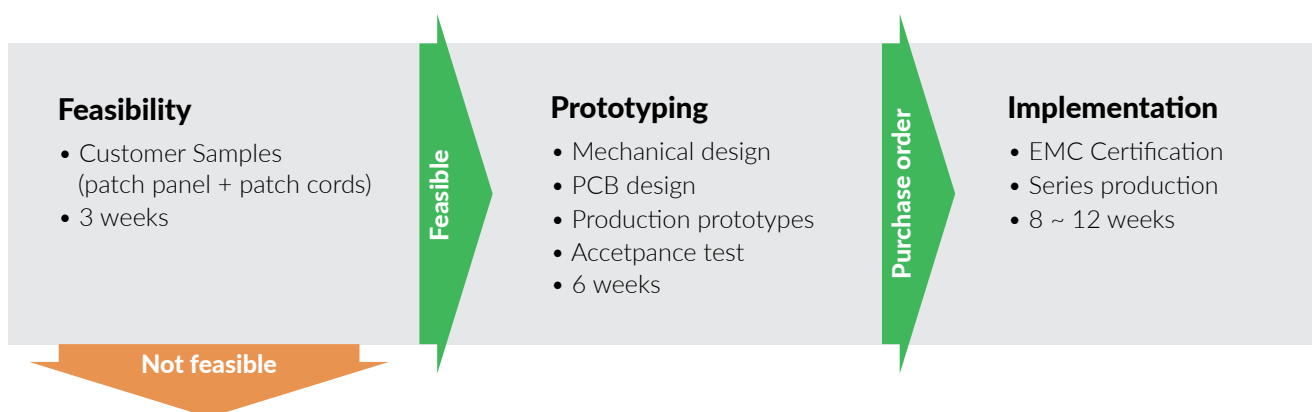

You don't only benefit from an IoT-layer custom designed to your infrastructure but also from our DCIM software that allows you to locate and identify your equipment and track any network changes.
